

C19010 (CuNi1.5Si)

18 08 US

Comparable standards: UNS C19010 • JIS C1901
 Aurubis designations: 7036 • PNA290

Description CuNi1.5Si is a precipitation-hardened copper alloy combining high electrical and thermal conductivity with elevated strength and good stress relaxation resistance. The special process of cold working and heat treatment ensures consistent properties combined with excellent formability. Alloy CuNi1.5Si has good corrosion resistance in industrial atmospheres and is resistant against stress corrosion cracking.

Composition

Cu*	Ni	Si	P
[%]	[%]	[%]	[%]
rem.	0.8 – 1.8	0.15 – 0.35	0.01 – 0.05

*) Cu + sum of named elements 99.5 % min

Physical properties

Melting point	Density	Specific heat cap. at 20°C	Electrical cond.	Thermal cond. at 20°C	Mod. of elasticity	Coef. of therm exp. at 20°C
[°F] [°C]	[lb/in ³] [g/cm ³]	[Btu/lb°F] [kJ/kgK]	[%IACS] [MS/m]	[Btu/ft h °F] [W/mK]	x1000 ksi [GPa]	[10 ⁻⁶ /°F] [10 ⁻⁶ /K]
1944 1062	0.323 8.94	0.09 0.377	≥ 50.0 ≥ 29.0	149 258	18.5 127	9.3 16.8

Mechanical properties

	Tensile strength Rm [ksi] [MPa]	Yield strength Rp0.2 min [ksi] [MPa]	Elongation 2'' min [%]	Hard-ness HR30T HV [-]	min bend ratio 90°		min. bend ratio 180°	
					GW	BW	GW	BW
TM06 R520S	75-86 520-590	64 440	9	150-170	0.5	0.5	1.5	2.0
TM08 R580S	84-94 580-650	78 540	8	170-200	0.5	0.5	1.5	2.0

Other tempers are available upon request.
 GW bend axis transverse to rolling direction. BW bend axis parallel to rolling direction

This leaflet is for general information only. No claims can be derived from it unless there is evidence of intent or gross negligence. The data given are no warranty that the product is of a specified quality and they cannot replace expert advice or the customer's own test.

Fabrication properties

Cold formability	good
Hot formability	excellent
Soldering	good
Brazing	good
Oxyacetylene welding	good
Gas shielded arc welding	good

Softening stability

Vickers hardness after heat treatment.
 (Temper H08, age hardened (R580S), typical values)

This leaflet is for general information only. No claims can be derived from it unless there is evidence of intent or gross negligence. The data given are no warranty that the product is of a specified quality and they cannot replace expert advice or the customer's own test.

Stress relaxation resistance

Stress remaining as a function of temperature and time.
 Measured with Cantilever-Bending-Test (ASTM E 328 – 02).
 Values above 1000 h calculated with Larson – Miller – Parameters.
 Initial stress 0.5·Rp0.2 (Temper H08, age hardened (R580S))

Typical uses Automotive, Electrical engineering, Connectors, Springs
